

March 4, 1950.

Dr. Aaron Novick,
Institute of Radiobiology and Biophysics,
6200 Drexel Ave.,
Chicago 37, Ill.

Dear Aaron:

The trip expenses come out:

Total Mileage: 419 [3109 to 3528]	at .07	29.33
less ORNL net contribution (after deducting Esther's RR return)		-12.00
		<hr/>
		17.33 = 248 mi.

[It would be most straightforward to claim 248 mileage, and note that]	
[part of trip was paid from other sources. However, if you wish,]	
[2 RR rt.]	13.46]
[taxi]	4.00]

Meals	10.00
-------	-------

Hotel	12.00
-------	-------

39.33

I'm just beginning to get over the effects of the trip, and having to meet deadlines on research grant applications, which are a terrible nuisance.

I am pretty sure now that there have been a few balanced lethals among X-rayed and probably also UV'd diploids, but it may be difficult to prove their constitution if they are completely stable. However, they account for a negligible part of the killing.

Thanks very much for putting me up - it would have been awfully depressing in that hotel room, and it was bad enough later at Oak Ridge. Hope to see you both again soon.

Sincerely,

Joshua Lederberg
